Bengaluru, Karnataka | +91 9663788004 | vishrutppatil@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Senior Software Engineer with 9+ years of experience building scalable, event-driven backend systems and modern web applications using C#, .NET Core, and React. Experienced in decomposing monolithic systems into independently deployable microservices, owning CI/CD pipelines end to end, and embedding test-driven, quality-first engineering practices across teams. Hands-on with Docker, Kubernetes, RESTful and GraphQL API design, event-driven architecture (Kafka), relational databases, and monitoring tools such as Grafana and Prometheus.

TECHNICAL SKILLS

Languages and Backend: C#, .NET Core, .NET Framework, ASP.NET Core, RESTful API design, GraphQL, Microservices, Kafka

Frontend: React.js (Redux, Hooks, Context API), Next.js, Angular, TypeScript, JavaScript, HTML5, CSS3

Databases: PostgreSQL, SQL Server, Redis, SQLite, NoSQL fundamentals

Cloud, Containers and DevOps: AWS (EKS, RDS), Docker, Kubernetes, Helm Charts, CI/CD (GitHub Actions), Git, Terraform (familiar)

Monitoring and Observability: Grafana, Prometheus

Testing and Quality: TDD, BDD, NUnit, Jest, Stryker, Unit and Integration Testing, Security Scanning, ShiftLeft Testing

AI Development Tools: GitHub Copilot, Claude, AI-assisted code review and test generation tools

PROFESSIONAL EXPERIENCE

Senior Software Engineer, OpenText (April 2025 - Present)

- Design and develop reusable React and Next.js components integrated with Optimizely headless CMS, collaborating with stakeholders to translate business requirements into technical solutions.
- Own CI/CD pipeline optimization end to end, reducing deployment friction and accelerating release cadence through automated quality gates.
- Supported the production release of the Webroot website, coordinating across engineering, QA, and stakeholders, and monitored the application post-launch.

Software Technologist I, Philips (October 2021 - April 2025)

- Worked on decomposition of the Picix monolith into independently deployable microservices (Authentication, User Management) using .NET Core, RESTful APIs, and event-driven communication patterns.
- Authored unit and integration tests as part of a TDD-driven workflow and embedded automated quality gates, including linting, coverage thresholds, and security scanning, into CI/CD pipelines.
- Analyzed system bottlenecks and drove container hardening using Alpine Linux Docker images on Kubernetes with Helm Charts, reducing image size and improving security posture, and used Grafana and Prometheus for monitoring.
- Mentored engineers on TDD practices, microservices design, and code quality standards, fostering continuous learning within the team.

Design and Development Engineer, Siemens Healthineers (August 2018 - September 2021)

- Built a cross-platform Lab Assistant Xamarin application with real-time device insights, remote control, and proactive reagent-level alerting for connected laboratory devices.
- Developed a patient-facing COVID-19 Rapid Antigen Test application using angular (ionic framework) with result analysis, guidance, and recommendations, working closely with stakeholders on requirements and rapid iteration.

Software Engineer, Inherit Systems (February 2018 - July 2018)

- Developed a cross-platform healthcare application using xamarin with real-time chat and HealthKit integrations, including blood glucose and insulin tracking, for remote care management.

Software Engineer, Givevalu Technologies (January 2017 - January 2018)

- Built Eduawake, a cross-platform Parent-Teacher Connect ERP application covering attendance, digital mark sheets, timetables, and real-time communication.

PERSONAL PROJECTS

Breeze-Trading (C#, .NET, GraphQL, REST)

- Built a .NET trading integration platform using ICICI Direct Breeze APIs, exposing GraphQL, REST, and MCP interfaces for programmatic access to trading and market data workflows.

ConvoBuddy (Next.js, TypeScript)

- Developed a local, privacy-first AI chatbot supporting multiple local LLM backends (Ollama, LM Studio, llama.cpp) and vision-capable models, with backend health checks and a Tailwind/Shadcn UI.

Password Manager (React, Node.js, CouchDB)

- Built a full-stack password manager with a React/Material UI client and a Node.js/CouchDB backend for secure credential storage and retrieval.

Personal Portfolio (React, TypeScript)

- Designed and built a personal [portfolio](#) web application using React and TypeScript.

EDUCATION

B.E. in Computer Science, Jain University, Bengaluru

ACHIEVEMENTS

- People's Choice Award, Hackathon, Philips
- 1st Place, Digital Hackathon, Siemens Healthineers
